DETAILED ACTION

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 9-11 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Mandai et al US Pat. 5,187,455. (Of record)

Mandai et al disclose a multilayer structure formed by laminating a plurality of dielectric layers (1 through 4); a transmission line 6 formed on a dielectric layer 3 embedded in the multilayer structure; a plurality of ground conductors (5 and 7) disposed on the dielectric layers and a pair of ground conductors (5 and 7) being disposed on opposite sides of the transmission line and a capacitance (C1 and C2) disposed on the multilayer structure and connected to the transmission line for setting a desired delay time of the delay line, wherein the capacitance is adjustable. Electrodes (11 and 12) formed on the respective ones of the dielectric layers provide the capacitance. The capacitance is provided by a variable capacitor. The capacitance is connected in parallel to the transmission line. (Figures 2, 5 and 9 and column 3 line 19 through column 4 line 67 specifically column 3 lines 42-60)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12, 13, 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mandai et al US Pat 5,187,455. (Of record)

The primary reference, Mandai et al teach a multilayer structure formed by laminating a plurality of dielectric layers (1 through 4); a transmission line 6 formed on a dielectric layer 3 embedded in the multilayer structure; a plurality of ground conductors (5 and 7) disposed on the dielectric layers and a pair of ground conductors (5 and 7) being disposed on opposite sides of the transmission line and a capacitance (C1 and C2) disposed on the multilayer structure and connected to the transmission line for setting a desired delay time of the delay line. The capacitance is connected in parallel to the transmission line.

Mandai et al is shown to teach all the limitations of the claim with the exceptions of the capacitance being a diode or varicap diode.

Art Unit: 2817

One skilled in the art, at the time of the invention, would have found it obvious to replace the general capacitance electrodes of Mandai et al with a diode or varicap diode since examiner takes notice of the equivalence of the general capacitance electrode and the diode or varicap diode for their use in the transmission line art and the selection of any of these known equivalents to provide capacitance would be within ordinary skill in the art.
